Project and testing

Field	Data
Game	Tower Rush
Domain	towerrushbanga.com
Email for contacting the author	support-info2@towerrushbanga.com
Author	Ariful Hosain, 29 years
Role	Developer-analyst of iGaming, Gambling and Betting products
Experience	10 years of analysis of game providers, online casino gambling and payment systems
Devices	Xiaomi 15 Ultra with Android 15 (HyperOS 2), iPhone 15 Pro
Testing country and target GEO	Bangladesh
Main site version	Bengali (Bangla), Bangladesh, bn-BD
International site version	English, without GEO binding
Online casino brands considered	1Win, Stake, 1XBET, Melbet, Parimatch, Crorebet

Field	Data
Deposits and testing	All six casinos accepted a deposit in the local currency. Tower Rush was tested with each operator.
Test period	November 2026

7. Information verified against images

12. Passport, technical environments and launch

Характеристики моделей: Xiaomi 15 Ultra, iPhone 15 Pro, Slimbook EVO 14 Ryzen 7 8845HS. Характеристики устройств и конкретная программная среда эпизода — разные записи; номер браузера, ОС или launcher обозначает версию, использованную в соответствующем эпизоде.

T02. Scope of actual verification

ID	Attribute	Value and scope
T02-01	Scope of actual verification	ENV-A01: mobile browser and 1win Android launcher, demo/real money; ENV-I01: Safari, demo/real money; ENV-D01: three browsers, demo and history. The separate native client of Tower Rush itself is not included in the scope.

GR23. Score result of the criterion

ID	Attribute	Value and scope
GR23-06	Score result of the criterion	Game rubric TR-GAME-1.0: rules 8/10×30%, control 8/10×25%, demo 9/10×15%, resilience 8/10×20%, reproducibility of the math 4/10×10%; total 7,75/10.
GR23-08	Explanation of the score	Plus demo — open FUN-entry and three explained bonus floors; the mathematical criterion takes into account the distribution of outcomes and the reproducibility of the PF-protocol according to the approved methodology. The operator rubric is separate.

GR25. Comparable statement

ID	Attribute	Value and scope
GR25-01	Comparable statement	Testable statement: “history and the app predict the next successful floor”; this is an analysis of the logic of the promise, without attributing the quote to a real author.
GR25-02	Testable object of the statement	The object is the next server result of an individual tower; interface videos and a successful external withdrawal are different objects.
GR25-03	Data available before the stake	Before the stake, the rules, public history and the permissible amount are available; the future revealed seed does not become available in advance.
GR25-04	Data available after settlement	After settlement, one's own round_id, accepted amount, gross, history and interface fairness data within the source are available.

ID	Attribute	Value and scope
GR25-05	Boundary of client and server action	The client sends Build/Cashout and renders the state; the server accepts the action and determines the outcome. Changing theme/language/animation does not create an accepted payout.
GR25-06	Sign of product mismatch	A different game_id, studio or mechanic in a similar app means a different product; this in itself is not a legal conclusion about a copy.
GR25-07	Model of selecting successful demonstrations	Selection control: 1 024 recipients are split in half five times, after each step only the successful branch is shown; this is the approved scheme for analyzing the selection of successful demonstrations.
GR25-08	Number of remaining branches or recipients	1 024/2^5=32 recipients in the remaining branch, 3,125% of the initial audience; the five selected successes characterize the selection result of this branch.

31. Partner arithmetic

ID	Attribute	Value and scope
31-01	Payment model	For the editorial team, the actual contract has not been activated; CPA, Revenue Share and Hybrid are analyzed separately as commercial calculations, without income from the author's gaming money.
31-02	Target GEO	Bangladesh for the calculation partner card AFF-01; this is not a list of operators permitted by GEO.
31-03	Qualifying action	Qualification: an adult new player with a first eligible deposit and no duplicate account in the calculation card.
31-04	Number of referred	40 referred in the calculation AFF-01, not the number of actual site visitors.
31-05	Number of qualified	12 qualified out of 40, conversion 30% according to the specified rule.
31-06	Rate CPA	25 USD per qualified: CPA=12×25=300 USD.
31-07	GGR	1 200 USD in a separate operator aggregate AFF-01; positive GGR does not equal deposits.
31-08	Bonus deduction	200 USD bonus deductions.
31-09	Expense deduction	100 USD payment and other agreed expenses.
31-10	NGR	NGR=1 200−200−100=900 USD.
31-11	Revenue Share portion	30% from NGR: Revenue Share=900×30%=270 USD.
31-12	Hybrid part CPA	Hybrid: 10 USD×12=120 USD CPA part.
31-13	Hybrid part RS	Hybrid: 15%×900 USD=135 USD RS part; total255 USD, not 300+270.
31-14	Negative carryover	If NGR is negative, carryover is agreed separately; in the calculation of AFF-01 there is no negative carryover.
31-15	Minimum number of deposits	10 qualifying deposits for the selected payout calculation;12 satisfy the condition.
31-16	Minimum number of active players	8 active qualified players;12 satisfy the condition.

ID	Attribute	Value and scope
31-17	Payout monetary threshold	100 USD payable; CPA300/RS270/Hybrid255 pass the threshold as alternative models, not three simultaneous incomes.
31-18	Payout cycle	Monthly after the period closes and qualification is reconciled; the editorial actual commission remains 0 USD without an active contract.
31-19	Withholding or cancellation	A duplicate account or a canceled payment removes the corresponding qualification; withholding is not assigned to all 40 referred.

Episode materials and editorial localization

Material	Which state it relates to	What exactly is described	Boundary
MAT-DEMO-01	Official mobile22:04:28	Balance99 680 FUN, Cashout215,6 FUN, Result×0,7/×2,8	Button — potential outcome of an active tower, not an external withdrawal
MAT-OP-D	Each OP-D after credit	Cash request, amount, currency, time, zero/positive fee	The receipt is linked to a confirmed cash operation
MAT-OP-R	Each OP-R after settlement	Bet, gross, round_id and balance	Settlement confirmed by the round record and balance
MAT-OP-W	Each OP-W after external receipt	Request, fee, external receipt, remaining balance at the casino	LocalOP-ID is not a publicTXID
MAT-FREE-01	INC-FREE-01 before/after correction	Credit0→bonus250 BDT; request chain	The failure and the correction are preserved simultaneously
MAT-RULES	Official demo/PDF snapshot 03.11.2026	Build/Cashout, three bonuses, cap, hour of inactivity	The protocolPF and wheel probabilities relate to the mathematical parameters of the game

Bangla bn-BD and international English use the same ID, currencies, amounts, terms and results. Translation of Build/Cashout relates to the interface label, not to a change in mechanics. Operator support, editorial email and the regulatory route are not interchangeable. Commercial formulasCPA/RS/Hybrid have their own calculation profile; the actual editorial commission 0 USD and the project model of the contact site are described separately from the casino interfaces.
